EDUCATION

The Ohio State University

B.S in Computer Science & Engineering | Specialization: Artificial Intelligence

Honors: Dean's List, Trustees Scholar, Choose Ohio First Scholar (1 of 80)

Coursework: Operating Systems, Networking, Data Structures and Algorithms, Artificial Intelligence

Clubs: OSU x 99P Labs AI Reading Club (Discussion Lead), Competitive Programming Club, ColorStack

Columbus, OH
Expected May 2026

TECHNICAL SKILLS & INTERESTS

Programming Languages: Python, Rust, Java, TypeScript, C++, SQL, Swift

Frameworks: React, Next.js, ARKit, Express.js, MCP, Pydantic, Selenium, BeautifulSoup, LangChain, Spring Boot

Tools: Git, Unix, gdb, Firebase, Docker, Harness, Kubernetes, MongoDB, Azure, Vercel

WORK EXPERIENCE

Wells Fargo

Software Engineering Intern

Columbus, OH
June 2025 – August 2025

- Cut defect triage time by 90% by deploying an AI agent in OpenShift containers that transformed Karate test failures into Jira bug reports.
 - Reduced service scaffolding time by 30 hrs/project through a codegen pipeline converting MongoDB schemas into Spring Boot microservices, adopted across 12 teams.
 - Built and integrated two MCP servers to parse Karate test data and manipulate Jira projects, strengthening engineering workflow automation.
- Prototyped and deployed Rust smart contracts; wrote shell scripts to configure stablecoin chains and ran them in Docker; authored documentation and demos that accelerated internal adoption.

Ohio State College of Medicine

Undergraduate Research Assistant

Columbus, OH
April 2024 – December 2024

- Automated faculty data collection across 200+ universities using Selenium + BeautifulSoup, saving 20 hrs/week.
- Processed 10,000+ researcher profiles into structured Excel reports via an openpyxl ETL pipeline for targeted study outreach.
- Applied TF-IDF analysis to embryology textbooks to prioritize high-value concepts, guiding curriculum refinements.

PROJECTS

Adobe Flash clone (Next.js, TailwindCSS, React, HTML5 Canvas API, Vercel) | [GitHub](#)

- Rebuilt Flash as a Vercel-deployed webapp, adopted by early users for frame-by-frame animation; achieved 60% faster load times than native Windows app.
- Implemented onion-skinning and a timeline editor for precise keyframe control and smooth playback.

Anki addon (Google Gemini, Pydantic, Linux) | [GitHub](#)

- Automated flashcard generation from lecture slides by integrating Gemini API with validated Pydantic schemas, saving 20 hrs/week in exam prep.
- Enabled inter-process communication on Linux between Anki frontend and backend microservice.

Gradient, HackOHIO Submission (MongoDB, Express, React, Node.js, Google Gemini)

- Led small team in building scalable backend integrating Gemini's multimodal API; achieved 80% handwriting recognition accuracy.
- Supported 300+ submissions/min with P95 latency <200ms, cut TA grading workload by 10+ hrs/week with real-time feedback.

Lymphedema Scanner, OSU-COM Hackathon Submission (ARKit, SwiftUI, Firebase)

- Won 1st place among 5 teams with a 2-week iPhone prototype app.
- Implemented ARKit-based face scanning with tetrahedron mapping to track facial swelling and improve monitoring accuracy.

Neural Network (Graphviz) | [GitHub](#)

- Built modular neural network from scratch (Neuron, Layer, MLP) trained with backpropagation; achieved loss value of 0.04.
- Enhanced interpretability by visualizing neuron gradients and connections with Graphviz.
