EDUCATION

The Ohio State University

B.S in Computer Science & Engineering | Specialization: Artificial Intelligence

Honors: Dean's List, Trustees Scholar, Choose Ohio First Scholar (1 of 80)

Coursework: Operating Systems, Networking, Programming Languages, Machine Learning, Neural Networks

Clubs: Claude Builders Club, OSU x 99P Labs AI Reading Club (Discussion Lead), ColorStack

Columbus, OH

Expected May 2026

TECHNICAL SKILLS & INTERESTS

Programming Languages: Rust, Go, Python (NumPy), TypeScript, Java, SQL, Verilog, C/C++

Infrastructure & Systems: Docker, Kubernetes, OpenShift, Unix, gdb, awk, sed

Frameworks: Model Context Protocol (MCP), FastAPI, Next.js, React, Rails, Pydantic, LangChain

Data & Cloud: MongoDB, Postgres, SQLite, Azure, Firebase

WORK EXPERIENCE

Wells Fargo

Software Engineering Intern (Platform + AI)

Columbus, OH

June 2025 – August 2025

- Architected and deployed an AI-powered defect triage system for OpenShift, utilizing LLMs to read stack traces and automate incident routing, reducing manual triage latency by 90%.
- Engineered custom Model Context Protocol (MCP) servers to orchestrate agentic tool-use across product management services, streamlining cross-team workflow automation.
- Developed a Go-based service for internal blockchain updates, ensuring data consistency and high-performance throughput for ledger transactions.
- Designed a Python codegen pipeline adopted by 12 engineering teams, automating microservice scaffolding and saving 30+ engineering hours per project.
- Owned end-to-end Rust development for smart contract prototyping, building CLI configuration tooling used by multiple internal stakeholders.

Ohio State College of Medicine

Undergraduate Research Engineer

Columbus, OH

April 2024 – December 2024

- Designed a scraping engine to automate data collection across 200+ university domains.
- Built an ETL pipeline processing 10k+ unstructured profiles into validated, structured datasets using Python for large-scale faculty analysis.
- Implemented TF-IDF and NLP analysis on medical curricula to quantify and prioritize high-impact educational topics for first-year students.

PROJECTS

Lymphedema Scanner – OSU College of Medicine Hackathon (1st place) | (ARKit, SwiftUI, Firebase)

- Architected iOS app tracking facial swelling via ARKit 3D mesh; achieved 95% detection accuracy.
- Engineered feature-extraction pipeline and Firebase sync; validated results with medical PI.
- Designed visualization tools for longitudinal comparison of 3D facial morphology data.

PropheSea, HackPrinceton Submission (3rd place) | (Kalshi, React, MCP, Next.js, FastAPI, Grok) | [Devpost](#)

- Built agentic trading platform for Kalshi markets using Grok search for real-time sentiment.
- Implemented event-driven pipeline to process market volatility and generate real-time bets.
- Ran historical backtests (82% accuracy) over NOAA data to benchmark signal quality and execution logic.

Adobe Flash clone (Next.js, TailwindCSS, React, HTML5 Canvas API, Vercel) | [GitHub](#)

- Engineered a pixel-based animation tool with a custom rendering engine supporting frame-by-frame sequencing.
- Optimized execution loop for smooth playback with adjustable frame-rate interpolation, reducing interactive latency.
- Designed a high-performance drawing system utilizing direct pixel manipulation for configurable brush dynamics.

Anki addon (Google Gemini, Pydantic, Linux) | [GitHub](#)

- Built LLM-powered backend converting lecture slides to validated cards via structured schemas.
- Refactored to multi-process architecture using Linux IPC, cutting generation latency by 30%.
- Developed robust Pydantic validation layer ensuring 100% schema adherence for generated flashcards.
